CORL 2026 · HALF-DAY WORKSHOP

Compositional Generalization for Real-World Robot Learning

Where does scaling suffice — and where does explicit composition remain necessary?

November 12, 2026 · Austin, TX, USA

TOPICS

Modality Composition
Combining scaled vision & language with data-scarce force and tactile sensing

Interfacing Modules
Abstractions for long-horizon manipulation and cross-embodiment transfer

Agents in Robotics
High-level reasoners invoking skills, tools, and controllers in the real world

Benchmarking Compositionality
Evaluating modularity, reusability, and transfer — beyond task success

INVITED SPEAKERS

Jiayuan Mao
UPenn

Marc Toussaint
TU Berlin

Leslie Pack Kaelbling
MIT

Danfei Xu
Georgia Tech / NVIDIA

ORGANIZERS

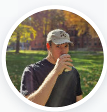
Haonan Chen
Harvard / Stanford

Shaoxiong Yao
UIUC

Wensi Ai
Stanford

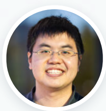
Shiping Ma
TU Berlin

Weirui Ye
MIT



Ben Zandonati
MIT

Haowen Liu
UMD



Yilun Du
Harvard

Jiajun Wu
Stanford

Call for Papers

Short papers & posters · non-archival · works-in-progress and negative results welcome

Sep 9 Submissions open
Oct 2 Deadline (tentative)
Nov 12 Workshop day
